

WHY GPEXPERT BACKUP MANAGER?

Get Control of your Group Policy Backups Now!

Changes to Group Policy Objects (GPOs) can affect large numbers of your systems. Having a process in place for regularly backing up GPOs is critical to ensuring that you can rollback changes that cause problems on your systems.

GPEXPERT™ Backup Manager for Group Policy provides a powerful mechanism for managing the backup and recovery of not only your GPOs, but the links to those GPOs, which are not managed by GPMC today! It also provides a set of capabilities for better tracking your Group Policy versions by letting you easily compare live GPO versions to available backups.

KEY FEATURES

- **At-a-glance management of GPO backups from a central console**
- **Backup and Recover GPOs and GPO Links**
- **Track backups by GPO version number and check GPOs to ensure the latest version has been backed up**
- **Schedule backups of GPOs and Links**
- **Unique “Backup and Edit” feature lets you back up a GPO right before editing it**
- **Leverages native GPMC backup format—existing backups can be easily included**
- **Event log-based logging of backup and restore events**
- **And more...**
